

[GOLF CLUB STRIKING PLATE WITH VARIABLE THICKNESS (Corporate Docket Number PU2177)]

Abstract

A golf club head having a striking plate with regions of varying thickness is disclosed herein. A central region has a first thickness range that is thicker than the thickness range of any of the other regions. The thickness of the regions decreases outward from the center. The striking plate may be used on a fairway wood-type golf club head or a driver-type golf club head. The striking plate is preferably composed of steel or titanium.
